

ECLIPSE IMMERSIVE SCREENS

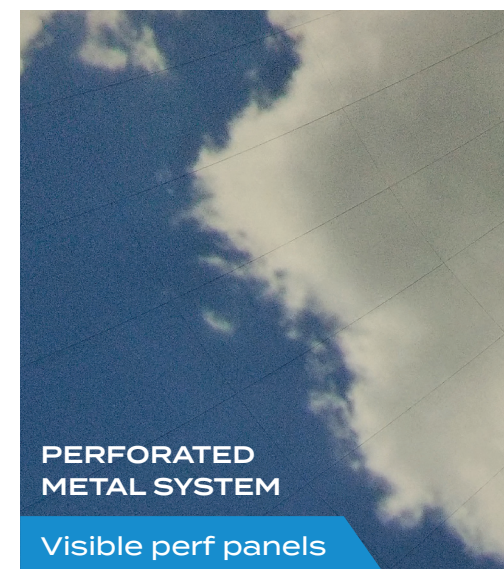

Better Visual Performance at a Lower Cost

Eclipse Screen systems offer superior advantages when compared to existing perforated metal screens.

The solid screen system is entirely seamless - allowing viewers to be in close proximity of the surface without visible evidence of the typical perf panel checkerboard pattern caused by dust collection, butt joints and panel color variances.

The overall Eclipse screen is approximately 22% brighter than its perforated metal counterparts. A significantly brighter screen allows the surface to be coated with a low-gain high-contrast coating, increasing the overall performance at lower lumen output. The optical coating is applied post screen installation, ensuring a smooth, consistent surface. Audio penetrates through the solid screen surface thanks to a patented sound technology preserving the approximation of sound to the relative media without affecting image quality. Additionally, the Eclipse screen is easier to repair and maintain.

WHICH SYSTEM PERFORMS BETTER?	Eclipse System	Perforated Metal System
Resolution	X	
Contrast	X	
Foot Lamberts (Brightness)	X	
Seamless	X	
Allows Rear Speakers	X	X
Repair Friendly	X	
Maintenance Friendly	X	
Class One Rated	X	X
A/V Equipment Cost Savings	X	
Cost Effective	X	
Moiré Effect	X	
Production/Manufacturing Leadtime	X
