

# TABLOID

## RIGID PROJECTION SCREEN

**TABLOID** is a rigid, aluminum panel screen without a raised bezel, making it a great solution with ultra short throw projectors. Orion optical screen coating comes in a wide range of gains from 0.3 to 1.0. **Tabloid will bring the best image out of your 4K/8K UHD projector.**

Tabloid is available borderless, for a floating image, or can have custom width borders that frame the image and absorb over scan. The solid screen panel remains flat, even when not installed in a vertical position. Tabloid can be mounted, without image sag, on angled walls with a downward tilt, or even on a ceiling. Multiple Tabloid screens can be tiled to form large video walls.

*Applications include: Commercial, Education, Museums, Broadcast, Home Theatre, and Command & Control.*

*Back of a Tabloid with wall mount brackets and magnets*
